

IMPORTANT NOTICE: Robert Bosch LLC and the manufacturers whose vehicles are accessible using the CDR System urge end users to use the latest production release of the Crash Data Retrieval system software when viewing, printing or exporting any retrieved data from within the CDR program. Using the latest version of the CDR software is the best way to ensure that retrieved data has been translated using the most current information provided by the manufacturers of the vehicles supported by this product.

Data Limitations

Restraints Control Module Recorded Crash Events:

Deployment Events cannot be overwritten or cleared from the Restraints Control Module (RCM). Once the RCM has deployed any airbag device, the RCM must be replaced. The data from events which did not qualify as deployable events can be overwritten by subsequent events. The RCM can store up to two deployment events.

Airbag Module Data Limitations:

- Restraints Control Module Recorded Vehicle Forward Velocity Change reflects the change in forward velocity that the sensing system experienced from the point of algorithm wake up. It is not the speed the vehicle was traveling before the event. Note that the vehicle speed is recorded separately five seconds prior to algorithm wake up. This data should be examined in conjunction with other available physical evidence from the vehicle and scene when assessing occupant or vehicle forward velocity change.
- Event Recording Complete will indicate if data from the recorded event has been fully written to the RCM memory or if it has been interrupted and not fully written.
- If power to the Airbag Module is lost during a crash event, all or part of the crash record may not be recorded.
- For 2011 Ford Mustangs, the Steering Wheel Angle parameter indicates the change in steering wheel angle from the previously recorded sample value and does not represent the actual steering wheel position.

Airbag Module Data Sources:

- Event recorded data are collected either INTERNALLY or EXTERNALLY to the RCM.
 - INTERNAL DATA is measured, calculated, and stored internally, sensors external to the RCM include the following:
 - > The Driver and Passenger Belt Switch Circuits are wired directly to the RCM.
 - > The Driver's Seat Track Position Switch Circuit is wired directly to the RCM.
 - > The Side Impact Sensors (if equipped) are located on the side of vehicle and are wired directly to the RCM.
 - > The Occupant Classification Sensor is located in the front passenger seat and transmits data directly to the RCM on high-speed CAN bus.
 - > Front Impact Sensors (right and left) are located at the front of vehicle and are wire directly to the RCM.
 - EXTERNAL DATA recorded by the RCM are data collected from the vehicle communication network from various sources such as Powertrain Control Module, Brake Module, etc.

NARRATIVE

On April 11, 2016, at approximately 0811 hours, I was notified of a crash on GA 292 (North Street East) near Semco Drive in Vidalia. I was advised that the crash involved a vehicle and a bicycle. Upon arriving at approximately 0821 hours, I was advised by Vidalia Police Sgt. A. Rollins that the bicyclist, Mr. Bunji Mark Takaya, had passed away. Sgt. Rollins advised me that the driver of the car was Mr. Michael Blake Tillery. Sgt. Rollins also pointed out a witness that had remained at the scene. Sgt. Rollins advised me that the Mr. Takaya's ID had been removed from his backpack, but everything else had been left where it was.

The witness (Brandi Kirkland) was closer to me, so I spoke with Mrs. Kirkland about the crash. Mrs. Kirkland stated that she was not directly behind Mr. Tillery, but that she had followed behind a maroon Tahoe all the way from Claxton. She explained that the Tahoe was directly behind Mr. Tillery at the time of the crash. She said that she

heard a "god awful racket" and then saw the Tahoe in front of her hit the brakes and swerve to the left. She continued by saying that she saw Mr. Takaya land on the side of the road. She advised that she did not see the bicycle prior to the accident occurring.

I then spoke with Mr. Tillery about the crash. Mr. Tillery stated that he remembered a car being in front of him, and that there were several cars in front of that vehicle. Mr. Tillery indicated that those vehicles turned onto Semco Drive. Mr. Tillery advised me that he did not remember seeing the bicycle at all. He stated that he heard the impact and realized that he had hit something. He continued by saying that he immediately stopped and ran back to Mr. Takaya. Mr. Tillery stated that he knew the bicyclist had not made it, but that it had not been confirmed to him. I advised Mr. Tillery that he was correct that the bicyclist had passed away.

I went back and spoke with Mrs. Kirkland and asked if remaining on scene would effect her job. She advised that she had already contacted her boss and that he had told her it was not a problem. I advised her that the bicyclist had passed away.

I then contacted the Troop F Communications Center and they advised that TFC3 Hardy was on call for the Troop F Specialized Collision Reconstruction Team. I contacted TFC3 Hardy and advised him of the information that I had obtained so far. He advised that he would contact TFC3 Jackson and that they would respond to the scene. He asked if we could secure the scene and keep the witness there if possible. I advised him that we could do that.

Lt. R. Corbitt contacted me and advised that Mr. Takaya's wife and family were at the hospital. I asked him if he would make the death notification since I could not leave the scene at that time. Lt. Corbitt and emergency room Dr. Munger notified Mrs. April Takaya that her husband had passed away.

The Vidalia Police Department had already contacted the city road department about bringing barricades and barrels. GA 292 was blocked off at its intersections with Semco Drive and Ruddell Road. Traffic was rerouted over to GA 30 during this time.

TFC3 Hardy arrived on scene and I spoke with him further about the information that I had obtained. He was given both identifications and the investigation was turned over to him. TFC3 Jackson arrived a short time later.

TFC3 Hardy asked if I would request voluntary blood and urine samples from Mr. Tillery. Mr. Tillery agreed to both requests. I contacted Toombs/Montgomery EMS to come to the scene to draw the blood that Mr. Tillery had agreed to provide. EMS advised that they would not respond back to the scene since Mr. Tillery was the Chairman of the Toombs County Commissioners and EMS fell under their authority. Since EMS would not respond to the scene, Mr. Tillery and I went to the Meadows Regional Medical Center Lab. Assistant Lab Director Regina Williams drew the blood samples at approximately 10:25 a.m. The blood tubes were labeled and secured in her presence. Mr. Tillery also provided a urine sample while we were there. This was also labeled and secured in her presence. The specimen bag was secured at this time also. We then returned to the scene.

Mrs. April Takaya and several of her friends had come to the scene. Toombs County Sheriff A. Kight and I spoke with Mrs. Takaya. I wanted to explain to her what the process was and why it was taking so much time at the scene. TFC3 Hardy interviewed Mrs. Takaya about Mr. Takaya's morning and where he was going.

TFC3 B. Scott arrived to assist TFC3 Hardy and TFC3 Jackson. Cooper's Towing was allowed to remove the vehicle and the bicycle from the scene after SCRTF advised me that the vehicles were cleared to leave the scene. A hold of up to 30 days was placed on both vehicles by TFC3 Hardy.
